SUBJECT INDEX

Numbers 48–51

References are in all cases to number and page, e.g., **48**, 65. Articles are indexed under what is judged to be a key-word in their titles (printed in small capitals). Cross-references are suggested under a number of general subject names. Paragraphs under the heading *Research Report* are indicated by (*R.R.*). Continuing references are, in general, not given.

Adventure, H.M.S., **50**, 8
Aerobee rocket, **48**, 81, 108. Inset: 9
Aether, **49**, 9
Agriculture. *See* CACAO, TRACE
Airglow, **48**, 12, 106, 132
Aitken, D., **49**, 118
Alcohol as an energy source, **49**, 23
Algae, as food, **49**, 27; in space-ships, **48**, 122
Allen, J. van, **51**, 103
Aluminium plating, **51**, 53
Ambrose, E. J., **50**, 117
Amines, intestinal production of, **50**, 92
Amino acids, as synthetic foods, **49**, 24; in the thyroid gland, **51**, 87
Ammonia, excretion of, **50**, 106
Ammonia maser, **50**, 59
Amphibians, metamorphosis in, **51**, 91
Analysis of trace elements, **51**, 62
Anthony, H. D., **49**, 122
'Anti-grav', **49**, 15
Apatite crystals in bone structure, **49**, 76, 84
Archaeopteryx lithographia. **50**, Insets: 12-13. *See* PALAEONTOLOGY
Arnon, **49**, 30
Associated Electrical Industries, **49**, 111, 116
Astronomy. *See* METEORITE, ROCKET, SATELLITE
Atlas rocket, **48**, 77. Inset: 15
Atmospherics, 'whistler', **51**, 105
Atomic explosion and magnetic disturbances, **51**, 106
Atomic Physics. *See* AURORA, BUBBLE, CYCLOTRON, GRAVITATIONAL, MICROTRON, ZETA
AURORA, Man-made. A. W. Haslett (*R.R.*), **51**, 106. Magnetic disturbances coincident with nuclear explosion
Auroral spectrum, **48**, 13
Aviation. *See* SPACE, ROCKET

Babcock, H., **49**, 28
Barnett, S. A., **50**, 122
Bates, D. R., **49**, 126; **51**, 105
Baumann, **51**, 87
BEAGLE, Voyages of H.M.S. D. B. Carlisle, **50**, 7. Admiralty charting of South America, 8; first voyage, 1826, 9; survey methods, 13; second voyage, 1831, 17; visit to Galápagos Islands, 21; voyage to Australia, 1837. Insets: 1-7
Beals, C. S., **50**, 113
Beaufort wind scale, **50**, 15
Beer, Sir Gavin de, **50**, 83, 108, 122
Beet, sugar, as producer of organic matter, **49**, 29
Bell Laboratory, **50**, 69
Benson, A. A., **49**, 116
Berrill, N. J., **51**, 115
Bevatron, **49**, 69
Bienotherium, **50**, 85
Biochemical engineering, **49**, 31
Biochemistry. *See* BONES, CHEMIST, DRUGS, FOODSTUFFS, PROTEIN, THYROID
Biology. *See* BONES, DRUGS, EVOLUTION, FOODSTUFFS, SPACE, TRACE
Bondi, H., **49**, 13
BONES, The Stuff of. G. M. Wyburn. **49**, 76. Types of bone cell, 78; the bone matrix, 81; calcification, 84; fluorine content, 85; fossilization, 86; problems of mineralization, 87; bone deformities and diseases, 89. Insets: 10-11
Books Received, **49**, 122; **50**, 121; **51**, 113
Botany. *See* CACAO, FOODSTUFFS, TRACE
Boyd, R. L. F., **51**, 114

Boyd, R. L. F., **51**, 114

Boyden, A., 50, 110
Boyland, E., 50, 102
Bragg, Sir W., 49, 99
Braun, Wernher v., 48, 63, 82, 120
Brenner, A., 51, 45
Brighteners, electroplating, 51, 55
British Association, 49, 98
BRITISH Association. A. W. Haslett (*R.R.*), 50, 116. Study of cell movement by new microscope. Adhesive properties of surface of cancer cell, 116; meteoric diamonds, 117; gastropod evolution in Loch Lomond, 119
Brocklehurst, K. G., 49, 124
Brodie, B. B., 50, 89
Broglie, L. de. Correspondence. 49, 120
Brower, J. Van Z., 49, 115
Brower, L. P., 49, 115
BUBBLE Chambers and Nuclear Research. J. R. Atkinson, 49, 56. Detection of atomic particles, 56; cloud chamber, 57; invention of bubble chamber, 58; 'clean' and 'dirty' chambers, 60; 'gas' chamber, 62; operational cycle, 64; uses, 65; meson production, 66; meson decay, 69; other reactions, 70; bubble chamber development, 71; theory of operation, 73. Insets: 12-16.
Burke, D. C., 49, 114
Butterflies, mimicry and mating in American species, 49, 115

CACAO – Its Cultivation, Processing, Chemistry. B. D. Powell, 51, 24. History of the cacao tree, 24; commercial species, 25; botany, 27; cultivation, 28; pests and diseases, 29; fermentation of the bean, 30; drying, 32; uses, 35; fermentation changes, 35; cacao butter, 38; carbohydrate content, 38; polyphenols, 39; proteins, 40; theobromine and caffeine, 40. Insets: 1-4.
Caffeine in cacao, 51, 40
Caine, H. Le, 49, 118
Calder, A. B., 51, 64
CALDER Hall. A. W. Haslett (*R.R.*), 50, 116. Increase of power of No. 1 reactor
Calvin, M., 49, 116
Canada, meteorite craters in, 50, 113
Cancer, 50, 100
Cancer cells, surface properties of, 50, 117
Car plating, quality of, 51, 58
Carcinogenic compounds, 50, 100
Cathode film in electroplating, 51, 45
Cavendish Laboratory, 49, 112
Centrifuge, human, 48, 117
Chapman, S., 51, 104
Chelation by bone cells, 49, 80
Chemical depositions of metals, 51, 51
CHEMIST, A Sceptical. Charles Vernon, 50, 44. Vital force theories, 44; the scientific hierarchy, 46; biochemistry and chemistry, 47; phosphate esters, 48; breakdown of glycogen, 50; free energy change, 51; the 'high-energy phosphate bond' theory, 53; pseudomeric reaction, 54.
Chemistry, Inorganic. *See* ELECTROPLATING, HELIUM, SILICONES
Chemistry, Organic. *See* CHEMIST, PROTEIN
Chocolate. *See* CACAO
Chromium plating, 51, 49
Cinematography, high speed, 51, 78
Clarendon Laboratory, 50, 69
Clausius, 51, 10
Cloud chamber, 49, 56
Cocoa. *See* CACAO
Collagen fibres, 49, 81
COMMUNICATION in the Field of Science. R. H. Macmillan, 49, 93. Correct principles, 94; different classes of recipient, 95; popularization, 98; characteristics of good communication, 100
Computers, low-temperature devices for, 51, 21
Consumption of food, graphs, 49, 18
Convection, dependence on gravity, 48, 119; and temperature regulation, 123
Cosmic ray hazards in space travel, 48 124
Cosmic rays, 48, 14, 96, 109
Craters, meteorite, 50, 113
Cretinism, 51, 87, 94
Cryotron, 51, 21
Cullington, A. L., 51, 107
Curry in diets of rats, 51, 99
CYCLOTRON Resonance. A. C. Rose-Innes, 50, 25. Measurement of 'effec-

tive mass' of conduction electrons, 25; semiconductors, 26; electron waves and forbidden momenta, 29; holes, 30; use of cyclotron resonance, 31; experimental apparatus, 35; resonance in semi-conductors, 37; effective mass diagram, 39; resonance in metals, 42. Insets: 14-16.

Darwin, Charles, 50, 71, 73, 86, 108, 122. *See also* BEAGLE
Debye, P., 51, 13
Demagnetization, cooling by, 51, 13
Deuterium, use in bubble chamber, 49, 68
Dexter, F. N., 50, 37
Diamonds in meteors, 50, 117
Dinosaur fossils, 50, 76. Inset: 9
Diseases, evolution of, 50, 109
'Distrophy', muscle, 49, 92
Dixon, 50, 54
Dolphins, echolation by, 51, 109
Doppler method of measuring ionization density, 48, 102; on Sputnik I, 103
Dresselhaus, G., 50, 37
DRUGS and Other Foreign Organic Compounds, The Metabolism of. R. H. Nimmo-Smith, 50, 88. 'Detoxication mechanisms', 88; oxidation, 89; reduction, 92; conjugation, 93; glucuronides, 94; amino acids, 96; acetic acid, 97; summation of effects, 97; activation of drugs, 99; carcinogenic compounds, 100; metabolic inactivations, 103; 'chemical defence' mechanisms, 104; excretion of ammonia, 106
Dynamo currents, measurement by rockets, 48, 133

Earth's shape, data from satellite tracking, 48, 134; 51, 105
Echolocation by whales, 51, 109
'Effective mass' of conduction electrons, 50, 25, 27, 39
Einstein, A, 49, 7, 11, 99; 51, 9
Electrojet or E-layer, 48, 108
Electronics. *See* HELIUM (Cryotron)
ELECTROPLATING Today. D. J. Fishlock, 51, 42. Traditional procedures, 42; plating solutions, 43; physico-chemical mechanism, 45; techniques of investigation, 46; new plating solutions, 47; chromium plating, 49; organo-metallic solutions, 50; chemical plating, 51; solutions for aluminium, 53; addition agents, 55; physical influences, 56; applied current, 57; quality of commercial plating, 58. Insets: 9-14
Elements, trace, 51, 60
Elton, C. S., 51, 114
Engineering. *See* ELECTROPLATING
Engineering, biochemical, 49, 31
Entropy, 51, 10
Esters, phosphate, 50, 48
EVOLUTION and a Congress. A. W. Haslett (*R.R.*), 50, 108. XVth International Congress of Zoology and centenary of Darwin-Wallace publication. Attempts to establish a biological station on Galápagos Islands, 108; evolution of diseases, 109; blood serum reactions as indicator of relationship, 110; fine structure in protozoa, 111; development of affection in monkeys, 112
Exosphere, 48, 9

Fairbank, W., 51, 19
Feher, George, 50, 69
Fermentation of cacao bean, 51, 30, 35
Fishman, W. H., 50, 104
Fitzroy, Capt. Robert, R. N., 50, 7
Fluids, in absence of gravity, 48, 118
Fluoborates as plating solutions, 51, 48
Fluorine-hydrogen rocket propellant, 48, 29
Fock, V., 49, 13
FOODSTUFFS, Unconventional Production of. N. W. Pirie, 49, 17. World food distribution, 17; graphs of consumption, 18; basic requirements, 20; food synthesis, 22; alcohol as an energy source, 23; molecular asymmetry, 23; amino acids and vitamins, 24; photosynthesis, 25; nuclear power for greenhouses, 26; algal culture, 27; production of organic matter, 29; choice of food plants, 30; biochemical engineering, 31; protein sources, 32; yeast cultivation, 35; problems of taste, 35. Inset: 9.
Fuels for rockets, 48, 24, 28, 84
Fusion, meson, 49, 71

Galápagos Island, **50**, 21, 108
Geography. *See* BEAGLE, METEORITE
Geology. *See* DIAMONDS, METEORITE, PALAEONTOLOGY
Giauque, F. W., **51**, 13
Gibbs function, **50**, 51
Glaser, D. A., **49**, 58
Glasgow University, **49**, 61. Inset: 13
Glucuronides, **50**, 94
Glycogen, breakdown of, **50**, 50
Goitre, **51**, 92, 97
Gold, T., **51**, 103
Gower, Sir E., **49**, 102
Gravitation, absence of, **48**, 117; synthetic, 120
Gravitational fields, physiological stresses of, **48**, 115
GRAVITATIONAL Waves. W. B. Bonnor, **49**, 7. Inability to influence gravity, 7; water waves, 8; electromagnetic waves, 9; plane and spherical waves, 10; waves and non-gravitational forces, 12; the Robinson-Bondi solution, 13; rotation and loss of energy, 14; wattage of gravitational waves, 15; gravitation and quantum theory, 15
Greenhouses, nuclear power for, **49**, 26
Grenville-Wells, H. Judith, **50**, 118
GUIDANCE, Control, and Instrumentation. W. H. Stephens and A. W. Lines, **48**, 39. Rocket navigation, 39; launching uncontrolled rockets, 40; thrust and weight, 41; gyroscopic datum of control, 42; methods of rocket rotation, 43; avoidance of oscillation, 44; gyroscope precision, 45; satellite trajectory, 46; satellite guidance, 49; acceleration measurement, 50; guidance loop, 51; final orbit, 52; atmospheric drag, 53; recovery of information, 53; instrument recovery, 57; satellite telemetry, 58; electrical power problems, 58; photo-electric power, 59; problems of satellite recovery, 60. Insets: 5, 7
Gyroscope in rocket control, **48**, 42, 45; in 'stable table', 50

Haber, L. F., **49**, 122
Hanson, N. R., **51**, 116
Harington, Sir C., **51**, 88
Harlow, H. F., **50**, 112
Harwell, Zeta team at, **49**, 110
Heat, specific, at low temperature, **51**, 9
Heating effects in rockets, **48**, 73
HELIUM, Fifty Years of Liquid. K. Mendelssohn, **51**, 7. Original liquifaction at Leiden, 7; common laboratory use, 8; low temperature physics, 8; breakdown of classical behaviour, 9; absolute zero and entropy, 10; cooling by gas liquifaction, 11; below 1°K, 12; cooling by demagnetization, 13; the magnetic refrigerator, 16; nuclear demagnetization, 16; two projected methods, 18; commercial applications, 19; liquid hydrogen for nuclear work, 20; loss-free electromagnetic devices, the cryotron, 21; superconductive memory devices, 22
Henderson, W. J., **49**, 118
Hewitt, E. J., **51**, 62
'Holes' in semiconductors, **50**, 30, 39
Hormone, thyroid. *See* THYROID
Hoyle, F., **49**, 98
Hunter, W. D. Russell, **50**, 119
Huxley, Julian, **49**, 98; **50**, 108
Hydrogen, liquid, **51**, 20
Hydroxyl emission in upper atmosphere, **48**, 12

Image converter tube, **51**, 76, 84
Image splitting in high-speed cinematography, **51**, 81
Imperial Chemical Industries, **49**, 40
Indium antimonide, **30**, 40
Infeld, L., **49**, 12
Innes, J. S., **50**, 114
Insulation, silicone, **49**, 54
Interferon, **49**, 114
International Geophysical Year, **48**, 81
INTERPLANETARY Space, Probing the Upper Air and. H. S. W. Massey, **48**, 7. Scientific interest of the study, 7; atmospheric pressure and density, 8; exosphere and tropopause, 9; action of sunlight, 10; dynamo currents in the ionosphere, 11; magnetic 'storms', 12; aurorae, 13; cosmic rays, 14; meteors, 16; rocket research problems, 17; value of satellites, 18; rocket history, 19

Iodine metabolism. *See* THYROID
Ionization density, measurement of, **48**, 101
Ionosphere, **48**, 10
Ionospheric refraction of radio, **48**, 89
Isaacs, A., **49**, 114

Jackson, J. S., **50**, 79
Jennings, R. E., **49**, 118
Jones, H., **49**, 116
Jupiter rocket, **48**, 74. Inset: 13, 16

Kapitza, **51**, 7, 20
Kapp, Prof., **49**, 94, 99
Kellogg, W. N., **51**, 109
Kendrew, J. C., **49**, 112
Keys, J. G., **51**, 107
King, Capt. Phillip, R. N., **50**, 8

Powell, B. D., 51, 24

Rose-Innes, A. C., 50, 25

Searle, C. E., 51, 86
Singer, J. R., 50, 57
Stephens, W. H., 48, 39
Swinton, W. E., 50, 72

Thorndike, M. H., 49, 39

Vernon, Charles, 50, 44

Wyburn, George M., 49, 76

SUBJECT INDEX

Numbers 52–54

References are in all cases to number and page, e.g. **52**, 65. Articles are indexed under what is judged to be a key-word in their titles (printed in small capitals). Cross-references are suggested under a number of general subject names. Paragraphs under the heading *Research Report* are indicated by (*R.R.*). Continuing references are, in general, not given.

Kuiper, G. P., 52, 82

'Lamb' shift, 53, 95
LAMP, The Tungsten Filament. J. A. Moore, 53, 72. Comparison with fluorescent tube, 72; history, 73; gas-filling, 74; coiled filament, 75; problem of sagging, 76; the modern lamp: filament and gas, 77; fuses, 79; precision, 80; design, 81; performance, 83; future development, 83. Insets: 1-9
Langmuir, 53, 73
Leeuwenhoek, A. van, 54, 67
Leptons and baryons, 52, 99
Leslie, J. A., 53, 61
Levine, S., 54, 31
Lidz, T., 52, 27
Lignin in jute, 54, 44
Lissapol, N., 53, 16
Long, C. N. H., 52, 28
Lyot, B., 52, 82

Macgrath, D. I., 52, 119
McLelland, W. J., 54, 34
Mathews, J. F., 53, 113
Maxwell, Clerk, 53, 47
Medicine. *See* DENTAL, RADIATION, STRESS, TOUCHING, TSETSE
Menzel, D. H., 52, 83
Merton, T., 54, 13
Mesons, 52, 99; strangeness of, 52, 101
Metals, radiation damage in, 52, 38
MICROBES in Industry. A. H. Rose, 54, 67. History of microbiological research, 67; synthesis *v.* fermentation, 70, metabolic activity of micro-organisms, autotrophs and heterotrophs, 71; industrial nutrients, 72; modifications of metabolism, 73; antibiotic manufacture, 73; recent advances in industrial micro-biology, 78; microbial food, 79; fermentation products, 81; 'living reagents' in synthesis, 82. Insets: 1-6
MICROSOMAL Particle, The: The Type-Setter of the Cell. J. M. Barry, 53, 48. Electron micrography of cytoplasm achieved, 49; building of protein, 50; radioactive tracing of amino-acids, 51; ATP and protein synthesis, 53; significance of results, 54; particles as 'information' carriers, 55; future research, 56. Insets: 13-14
Mitochondria, 53, 49
Moir, J., 53, 61
Möller, F., 52, 88
Mott, N. F., 53, 91
Muller, H. J., 53, 28

Nagana disease of cattle. *See* TSETSE
Nark, T. A. M., 52, 75
Naylor, J. H. C., 52, 117
Neutron damage in reactors, 52, 42
Neutron energy in fission, 52, 43
Newton, I, 54, 7

Orr, R.H., 52, 119
Osram lamps, 53, 74

Palade, G. E., 53, 49
Parity in particle interactions, 52, 102
Pasteur, L., 53, 47; 54, 67
Penicillin, industrial production of, 54, 73
PENICILLINS, Route to New. A. W. Haslett (*R.R.*), 52, 115. Chemical and microbiological approaches to modification; isolation of 'core' of penicillin molecule, 116; objectives of Beecham group research, 117
Perkins, F. T., 53, 111
Peroxy radical, 54, 96
Peterson, D., 54, 84
Petroleum combustion, 54, 92
Photographs, social, stereotyping of, 54, 110.
Physics. *See* ELECTRON, ELEMENTARY, HEAT, LAMP, SATELLITE, SPECTROSCOPY
Poliomyelitis immunization, R.S. Exhibit, 53, 111
Pribil, R., 52, 8
Protein synthesis. *See* MICROSOMAL
Psychology. *See* STEREOPHONIC, STRESS, TOUCHING

Rabi, 53, 95
Radiation balance of Earth and Venus, 52, 88
RADIATION Damage in Metals. A. A. Johnson, 52, 38. New metallurgical problems of reactors, 38; crystal structure of uranium, 39; effects of processing, 41; thermal spikes, 42; energy liberation in fission, 44; radiation growth, 47; radiation swelling, 48; non-fissile materials, 50. Insets: 14-16
RADIATION Hazards. A. W. Haslett (*R.R.*), 53, 116. Recommendations on 'maximum genetic dose' by International Commission for Radiological Protection
RADICALS, Free, in Combustion Processes. Leonard C. Roselaar, 54, 86. Study of gaseous reactions, 86; stages of reaction, 87; free-radical mechanisms, 89; thermal decomposition of hydrocarbons, 91; combustion reactions, 92; alkoxy radical, 94; alkyl radical, 95; peroxy radical, 96; acetyl radical, 97
Radioactive tracing of amino-acids, 53, 51
Rare metals, purification of, 52, 17
Rats, 'gentling' of, 54, 30
Reactors, metallurgical problems in, 52, 38
Reyniers, J. A., 54, 36
Riley, R., 53, 112
Rolinson, G. N., 52, 116
ROYAL Society Exhibits. A. W. Haslett (*R.R.*), 53, 108. Dislocations of crystals, 108; structure and function in bacteriophage, 109; poliomyelitis immunization, 111; wheat-rye hybrids, 112; super-graphite, 112
Rye-wheat hybrids, 53, 112

Sandorfy, C., 54, 21
Sanger, F., 53, 50
SATELLITES, Discoveries from. A. W. Haslett (*R.R.*), 52, 120. Trapping regions of Earth's magnetic field
Schayer, R. W., 52, 27
Schwarzenbach, G., 52, 7
Schwinger, 53, 95
Selye, H., 52, 32
Sexual isolation and genetics, 53, 28
Simon, F. E., 53, 115
Sinton, W., 52, 82
Skin senses. *See* TOUCHING
Sleeping sickness. *See* TSETSE
Sociogrammetry, 54, 106
SOCIOLOGY from the Air. L. Silberman, 54, 101. Development of air–social sciences, 101; census work, 103; urban studies, 104; natural resources and cultivation, 105; sociogrammetry, 106; evaluation, 107; a new subdiscipline, 109. Insets: 10-12
SPECIES? What is the Origin of. C. H. Waddington, 53, 25. The unsolved problem, 25; chromosome alterations and the 'gene pool', 26; reproductive barriers, 27; laboratory studies, 29; selection against cross-mating, 31
SPECTROSCOPY, Infra-red. J. E. Page, 54, 7. Use in identification of organic compounds: Infra-red spectrum, 7; molecular frequencies, 9; stretching and bending vibrations, 11; the modern spectrophotometer, 12; double-beam type, 13; preparation of samples, 15; applications, 16; identification, 17; analysis, 18; elucidation of structure, 20; spectra of isomers, 21; absolute intensity measurement, 25. Insets: 7-9. Molecular frequencies, identification by infra-red spectroscopy, 54, 9
Spinal cord, effects of transection of, 52, 31
STEREOPHONIC Sound Reproduction. J. Moir, 53, 57. 'Naturalness' of reproduction, 57; advantages of stereophonic systems, 58; directivity of human hearing, 59; binaural hearing, 61; multi-channel transmission, 65; microphone and loudspeaker placement, 66; stereophonic gramophone recording, 68. Inset: 10
Steroids, analysis by infra-red spectroscopy, 54, 23
Streptomycin, 54, 75
STRESS: The Modern Malady. R. Robinson, 52, 22. Bodily changes in stress,

22; sympathetic nervous system, 23; adrenal medulla, 25; adrenaline and noradrenaline, 26; ACTH, 28; secretions of the adrenal cortex, 30; transection of spinal cord, 31; 'general adaptation syndrome', 33; diseases of adaptation, 34; cortisone and ACTH therapy, 36. Inset: 17
Strong, H. M., 53, 114
Strontium-90, chelation of, 52, 15
Sutherland, G. B. B. M., 54, 12
Swynnerton, C. G. M., 52, 75
Synthesis, microbial 'reagents' in, 54, 82

Taming of animals, 54, 31
Tamiya, Prof., 54, 79
Teepol, 53, 15
Teeth. *See* DENTAL
Thompson, H. W., 54, 12
Thomson, J. J., 53, 72
TOUCHING. S. A. Barnett, 54, 27. New ideas on role of skin in behaviour, the skin senses, 27; handling and stress, 29; 'gentling' and adrenal gland, 30; handling and taming of animals, 31; anxiety, 32; learning, 33; biological significance of contact stimuli, 34; contact in infancy, 35
Trace metals, control of, 52, 12
Tripoly phosphates, in detergents, 53, 11
Trypanosomes and disease, 52, 70
TSETSE: The Scourge of Africa. J. L. Cloudsley-Thompson, 52, 69. Symptoms of sleeping sickness, 69; related diseases of cattle, 71; spread of sleeping sickness, 73; habitat of tsetse, 74; entomological problems of species, 75; insecticides and host-destruction, 76; social aspects of problem, 77. Insets: 1-6
Tucker, D. W., 52, 112
Tungsten, use and processing for lamps, 53, 72
Types, theory of chemical, 53, 35

Ubbelohde, A. R., 53, 113
Uranium, anisotropy of, 52, 39
Urey, H. C., 52, 83

Van Allen, J. A., 52, 120
Vanillic acid production in stress, 52, 28
Venus, the planet, 52, 79

Waksman, S. A., 54, 75
Water, hardness, 52, 7; and detergents, 53, 7
Water, heavy, analysis of, 54, 18
Weiner, F. M., 53, 63
Weizmann, C., 54, 68
Welsback, 53, 73
Wheat-rye hybrids, 53, 112
Wheeler, Mortimer, 54, 101
Whiteners, optical, 53, 21
Wightman, W. P. D., 53, 47
Wildt, R., 52, 80
Whipple, F. L., 52, 83
Wurtz, A., 53, 38

Yeast as food, 54, 80

Zamecnik, P. C., 53, 52

INDEX OF AUTHORS

Numbers 52–54

Further information about any author is to be found in the columns *About our Contributors*, which appears in each issue. The numbers in heavy type indicate the number of the volume.

Aiken, J. K., **52**, 7

Barnett, S. A., **54**, 28
Barry, J. M., **53**, 49
Bell, W. A., **54**, 39

Cloudsley-Thompson, J. L., **52**, 69
Cook, P., **53**, 33

Faragó, P. S., **54**, 87
Firsoff, V. A., **54**, 79

Haslett, A. W., **52**, 112; **53**, 108; **54**, 112
Hodgson, P. E., **52**, 95

Johnson, A. A., **52**, 38

Moir, J., **53**, 57
Monkman, J. R. P., **53**, 7
Moore, J. A., **53**, 72

Page, J. E., **54**, 7

Robinson, R., **52**, 22
Rogers, G. L., **54**, 58
Rose, A. H., **54**, 67
Roselaar, L. C., **54**, 87
Roydhouse, **52**, 53

Silberman, L., **54**, 101

Waddington, C. H., **53**, 25
